

Network & Computer Systems Administrator

Contact: Barbara R. Murray, Executive Director | 757.401.8259 | brmurray.accelerate@aapa-ports.org

Ensuring that your organization's computer networks are safe and reliable is critical to your operational efficiency and overall employee productivity. .

A structured **Network & Computer Systems Administrator** apprenticeship program can help your company recruit new hires or upskill incumbents as well as students who have completed relevant high school CTE or college workforce courses in computer science. An apprenticeship program provides workers with paid, mentor-led training in industry-validated skills and competencies, and starts them on a career pathway that can lead to higher-level and supervisory positions such as IT Manager or Senior IT or IT Project Manager.

ACCEraterate Apprenticeship can help your organization develop a customized apprenticeship program to train network and computer systems administrators. As a U.S. Department of Labor (DOL)-approved occupation the network and computer systems administrator model provides a 1 year, hybrid program which includes foundational workplace-based training and related instruction in the following areas:

- Computer & Security Basics
- Client Operating System Basics
- Network Operating Systems
- Advanced Networking

The program model prepares your apprentices to sit for numerous potential industry certification and credentialing exams including CompTIA A+, Network+ and Security+, Cisco Certified Network Associate (CCNA). Through our relationship with several community and technical colleges nationwide, your apprentices could access remote learning and earn college credit toward an academic certificate or degree.

Ready to build a future proof workforce? Learn how we can help with FREE expert technical assistance, program support, and targeted incentive funding. Visit our website at www.accelapp.org.

ACCEraterate Apprenticeships is a USDOL-funded initiative of the American Association of Port Authorities (AAPA) to provide seaports and transportation, distribution and logistics (TDL) supply chain employers with tools, resources and ongoing support to build strong, sustainable apprenticeship programs.

DID YOU KNOW?

Apprenticeship has been proven to:

- reduce turnover and associated costs with recruiting and onboarding
- increase productivity
- eliminate skills gaps
- generate positive ROI
- create a more diverse workforce
- increase competitive advantage with a more highly-skilled, certified or credentialed workforce
- enable companies to better align human capital with work demands
